                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized fundus library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Contact: Soares, MB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             395
```

then used as a tracer in a subtractive bybridization for the production of single-stranded circular DNA. This was then used as a tracer in a subtractive bybridization with a driver [CRC amplified inserts from a pland DNA template proparation) comprising: a) a pool of about 39,000 clones from the Rat Unigene Set corresponding to plates R-5-AN N excluding plates R-5-MA and NN. This pool represented 40% of the final driver population. b) a pool of about 29,000 clones from subtracted libraries CAO and CAI corresponding to plates R-CAO-BRZ through R-CAO-BRZ, R-CAO-BRZ

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention also relates to expression vectors and host cells comprising DNA encoding mouse neutral/alkaline ceramidase, the recombinant production of the ceramidase, an antibody against the ceramidase, and a method for controlling the ceramide content in cells and/or tissues by introducing the gene or its antisen nucleic acid into the cells and/or tissues. The ceramidase can be used as a lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramide metabolism. The present sequence represents DNA encoding the mature mouse neutral/alkaline ceramidase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mammalian neutral/alkaline ceramidase applicable as lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramide metabolism -

against the ceramidase, and a method for controlling the ceramide content in cells and/or tissues by introducing the gene or its antisense nucleic acid into the cells and/or tissues. The ceramidase can be used as a lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramide metabolism. The present sequence represents the mouse neutral/alkaline ceramidase open reading frame (QXF). Sequence 2271 BP; 647 A; 541 C; 525 G; 558 T; 0 other; Query Match 100.0%; Score 2049; DB 21; Length 2271; Best Local Similarity 100.0%; Pred. No. 0;	Mammalian neutral/alkaline ceramidase applicable as lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramide metabolism - Example 4; Page 57-58; 76pp; Japanese. Example 4; Page 57-58; 76pp; Japanese. The invention relates to a mouse neutral/alkaline ceramidase and to nucleic acids encoding it. The invention also relates to expression vectors and host cells comprising DNA encoding mouse neutral/alkaline ceramidase, the recombinant production of the ceramidase, an antibody	(TAKI) TAKARA SHUZO CO LTD.                                                                                                                                                                                                                                                                                                                                                      The invention relates to a mouse neutral/alkaline ceramidase and to nucleic acids encoding it. The invention also relates to expression vectors and host cells comprising DNA encoding mouse neutral/alkaline ceramidase, the recombinant production of the ceramidase, an antibody against the ceramidase, and a method for controlling the ceramide content in cells and/or tissues by introducing the gene or its antisense nucleic acid into the cells and/or tissues. The ceramidase can be used as a lipid engineering reagent for studying structure and functions of ceramide metabolism. The present sequence represents a clone encoding mouse neutral/alkaline ceramidase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mammalian neutral/alkaline ceramidase applicable as lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramide metabolism -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mus

The invention also relates to expression vectors and host cells comprising DNA encoding mouse neutral/alkaline ceramidase, the recombinant production of the ceramidase, an antibody against the ceramidase, and a method for controlling the ceramide content in cells and/or tissues by introducing the gene or its antisense nucleic acid into the cells and/or tissues. The ceramidase can be used as a lipid engineering reagent for studying structure and functions of ceramide as well as developing drugs for diseases associated with ceramidae netabolism. The present sequence represents a clone encoding

immunogen

```
The present sequence is a cDNA encoding human mitochondrial ceramidase protein. Ceramidase protein and gene are useful for treating a disease or disorder involving cell over proliferation or sphingolipid signal transduction especially breast cancer, cardiovascular disorder or inflammation. Ceramidase protein and gene are useful for treating disorders involving deficient cell proliferation or growth e.g. neurodegenerative disorders (Alzheimer's disease), growth deficiencies and lesions. Ceramidase protein is also useful for diagnosis of hyperproliferative diseases. Ceramidase gene can be used as an immunogen to generate antibodies which are useful for diagnosis, prevention and treatment of hyperproliferative diseases and for detecting ceramidase gene product in a biological sample. The hyperproliferative disorders include cancers and autoimmune disorders such as lupus nephritis, gendervalar disease. Ceramidase gene is also useful in antisense therapy
                        glomerular disease.
and gene therapy.
                                                                                                                                                                                                                                                                                         Human mitochondrial ceramidase protein and gene, modulation of which is useful for preventing and treating proliferative disorders e.g. cancer, cardiovascular disease, inflammation and neurodegenerative disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; ceramidase; nephrotropic; antipsoriatic; antisense therapy; gene therapy; proliferative disorder; cancer; cardiovascular disease; inflammation; neurodegenerative disorder; cytostatic; immunosuppres; nootropic; signal transduction; breast cancer; autoimmune disorder; Alzheimer's disease; growth deficiency; lesion; lupus nephritis; glomerular disease; ss.

The present sequence is one such murine 7TM-GPCR coding sequence. The presen sequence was derived from stromal stem cells. The present sequence and its corresponding protein are useful in the prevention, diagnosis an treatment of diseases associated with inappropriate 7TM-GPCR expression. 7TM-GPCRs identify specific signalling molecules, to activate an effector-signalling cascade that triggers an intracellular response and eventually a biological effect.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 1; Page 125;

                   The invention relates to human sialyl transferase (HST30-1) 11.99 with cytostatic, virucidal, immunomodulatory, antiinflammatory and haemostatic activity. The protein and encoding polynucleotide are used in diagnosis and treatment of malignant tumour, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and various inflammations. The polynucleotide is useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                gene
